Office: 413-452-1302; Cell: 413-262-4957

FOR IMMEDIATE RELEASE

**Springfield Water and Sewer Commission
Announces Fix a Leak Week Event**

Saturday, March 19, 2016 – 12:00pm to 4:00pm
Lowe's – 1560 Boston Road, Springfield, MA

The Springfield Water and Sewer Commission will host an educational event at Lowe's on Boston Road on Saturday, March 19th from 12pm to 4pm to educate Springfield residents about residential water leaks and the steps homeowners can take to detect and repair leaks.

Commission staff will distribute leak checklists, information sheets, and toilet leak detection tabs (while supplies last). Water meters will also be on display. The event will take place in the vicinity of the plumbing department.

Fix a Leak Week is March 14-20, 2016. According to the Environmental Protection Agency, household leaks account for more than 1 trillion gallons of water wasted each year in the U.S. In addition to needlessly wasting this precious natural resource, leaks also cost money. Timely repair of leaks and proper maintenance of home plumbing can save homeowners money on their water and sewer bill.

Here are some simple steps homeowners can take to check for leaks:

- Check your water meter before and after a two-hour period when no water is being used. If the meter does not read exactly the same, you probably have a leak.
- Check faucets for leaks by monitoring for drips of water under sinks and from exposed pipes. Check for drips when the faucet is in the on and off position.
- Check toilets for leaks by placing a few drops of food coloring in the toilet tank. If the color shows up in the bowl within 15 minutes without flushing, you have a leak. Flush immediately after this experiment to avoid staining the tank.
- Check pipes for leaks by monitoring for drips of water coming from exposed pipes.

- Monitor your water bill. If water usage spikes without any obvious change to indoor and outdoor water use patterns, you may have a leak.

Common types of leaks found in the home include worn toilet flappers, dripping faucets and showerheads, and other leaking valves. All are relatively easy to correct. The services of a plumber may be required for more complicated repairs.

More information about Fix a Leak Week is available on our website: waterandsewer.org.

About Fix a Leak Week

Because minor water leaks account for more than 1 trillion gallons of water wasted each year in US homes, the US Environmental Protection Agency's WaterSense program promotes Fix a Leak Week the third week of March each year. Fix a Leak Week is an annual reminder to Americans to check household plumbing fixtures and irrigations systems for leaks. To learn more, visit http://www.epa.gov/watersense/our_water/fix_a_leak.html.
