

Springfield Water and Sewer Commission

Little River Watershed Public Conservation Areas

The Springfield Water and Sewer Commission (Commission) maintains thousands of acres of watershed land, some of which is publicly accessible. This map identifies public conservation areas that are open to the public for passive recreational activities (shaded green) and where public access is not allowed (shaded orange).

Public Conservation Area Rules and Regulations

Permitted Recreational Activities

- Hiking
- Cross country skiing and snowshoeing
- Snow vehicle usage with written authorization from the Commission*

- Metal detectors or the use of similar devices

About the Little River Watershed

The Little River Watershed area is comprised of 31,102 acres of land in the municipalities of Becket, Blandford, Granville, Otis, Russell and Tolland that surround the Commission's active public drinking water reservoirs, Cobble Mountain and Borden Brook reservoirs. The Commission owns 14,808 acres of land in the watershed, of which 1,550 acres is open to passive recreation. The rules and regulations for public conservation areas are intended to protect the drinking water supply by limiting activities that could introduce potential contaminants or otherwise have a detrimental effect on water quality. Together, we can enjoy the natural beauty of the watershed lands while protecting a critical public drinking water supply that serves approximately 250,000 people.
