FOR IMMEDIATE RELEASE

Public Notification About Drinking Water Test Results from the Springfield Water and Sewer Commission

The Springfield Water and Sewer Commission (Commission) is notifying its customers of an exceedance of the maximum contaminant level (MCL) for the disinfection byproduct (DBPs) haloacetic acids (HAA5) in the drinking water. Sample results taken on March 1, 2023 indicated that our system exceeded the standard or maximum contaminant level (MCL) established by drinking water regulations for HAA5 at 7 of the 8 sample locations.

The MCL for HAA5 is 60 parts per billion (ppb) calculated as the average of the results from the past four quarters at an individual sample site. All individual sample-site results from March 1, 2023, were below the MCL of 60 ppb. Since the annual average at 7 of the 8 sample sites exceeded 60 ppb, however, the results still qualify as an exceedance of the MCL.

The exceedance was not an immediate health hazard and customers may continue consuming and using their water as normal. If this had been a public health emergency, customers would have been notified within 24 hours.

To address exceedances for DBPs including HAA5 and replace end-of-life infrastructure the Commission is building a new [West Parish Filters Water Treatment Plant](#). Design of the treatment plant, as well as construction of Phase 1 of the project, is currently underway.

HAA5 Formation

HAA5 forms when chlorine reacts with dissolved natural organic matter (NOM) found in surface water bodies such as the Commission's Cobble Mountain Reservoir, the main source of the drinking water supply. The amount of chlorine necessary to maintain safe disinfection is determined by the amount and types of dissolved NOM in the raw water.

The Commission's West Parish Filters Water Treatment Plant was last modernized in 1974 and is not capable of removing the current levels of NOM to the extent necessary to meet DBP regulations. The amount of NOM in the raw water and necessary chlorine dosages contributed to elevated HAA5 levels in the distribution system.

DBP Regulation

Regulations related to DBPs were first adopted in 1998 and revised in 2012. DBPs are regulated because some studies suggest that consumption of water with DBPs in excess of the MCL *over many years* (i.e. decades or a

lifetime) may result in potential health risks. The MCL set for HAA5 provides a wide margin of protection against health effects.

The regulatory limit for DBPs is a running annual average, and elevated results from past quarters may impact future compliance calculations. The next sampling will take place in June 2023.

Solutions

The Commission continues to adjust the existing treatment process to maximize NOM removal while advancing construction of the new treatment plant as quickly as possible.

Design and construction of a new treatment plant that will meet 21st century standards is a complex process. Until the new treatment plant comes online the Commission expects there will continue to be exceedances of the MCL for HAA5, especially as the region experiences more severe weather patterns and events. Customers will receive notification anytime there is an exceedance.

Complete: Planning

- The West Parish Filters Facility Improvements Plan, initiated in 2015, was completed in 2021 and determined a multi-phase approach to replace the water treatment plant.

Underway: Design and Phase 1 Construction

- Design of the new treatment plant is currently underway and on schedule (30% completion).
- Phase 1 construction of plant upgrades, the new [Clearwell and Backwash Pump Station Project](#), began in 2021 and is expected to be completed later this year.

Upcoming: Design Approval and Construction

- Final designs of the new treatment plant must be approved by MassDEP before construction can begin.
- Construction of the new treatment plant is expected to start in 2024.

Strategic Financing and Accelerated Project Schedule

- Plant upgrades advancing with support of competitive low-interest state and federal loan programs including the U.S. Environmental Protection Agency's (EPA) Water Infrastructure Finance and Innovation Act (WIFIA) Program and Massachusetts Clean Water Trust State Revolving Fund (SRF).
- Strategic and competitive financing through [WIFIA](#) and SRF will allow most of the West Parish Filters Water Treatment Plant construction to occur over an accelerated six-year schedule and will save ratepayers approximately \$60 million in borrowing costs.

More information on the West Parish Filters Water Treatment Plant Facilities Improvements and other project updates are available on the Commission's website <https://waterandsewer.org/new-water-plant/>.

Additional Information

Customers with questions about the public notification or DBPs should contact the Commission by calling 413-310-3501, or by emailing info@waterandsewer.org.

More information can be found on the Commission's website at:
